Deadline for manuscript
submissions:

30 June 2021

Message from the Guest Editors

This Special Issue will highlight research efforts in developing coatings or polymer films to protect structures immersed in the marine environment against biofouling. The ambition of this Special Issue is to bring experts from around the world providing the latest basic and applied research advances in chemistry, physical chemistry, coatings, and materials for this purpose. Over the recent past, research into novel antifouling or fouling release polymers and coatings has gained significant attention. This Special Issue will focus on key challenges in inhibiting biofouling colonization by designing materials with tailored surface chemistry, topography, and bioactivity. Themes on biodegradable or hydrolyzable polymers, bioinspired synthetic antifouling coatings, biomimetic approaches imitating topographical patterns of a marine organism's surface, smart coatings or engineered surfaces will be included.

Message from the Editor-in-Chief

Materials (ISSN 1996-1944) was launched in 2008. The journal covers fourteen comprehensive topics: Biomaterials; Energy Materials; Composites; Structure Analysis; Porous Materials; Manufacturing Processes; Advanced Nanomaterials; Smart Materials; Thin Films; Catalytic Materials; Carbon Materials; Materials Chemistry; Materials Physics; Optics and Photonics; Corrosion; Building Materials. The distinguished and dedicated editorial board and our strict peer-review process ensure the highest degree of scientific rigor and review of all published articles.

Materials provides an unique opportunity to contribute high quality articles and to take advantage of its large readership.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed by the **Science Citation Index Expanded** (Web of Science), **Ei Compendex** and **other databases**. Citations available in **PubMed**, full-text archived in **PubMed Central**.

CiteScore (2019 Scopus data): **3.5**, which equals rank 173/460 in 'General Materials Science'.
